In the Hot Seat

Renette Jacobsz - GM

What motivates you?

My personal mission statement is being the positive change in every person I engage. It's a tough vision to bring to reality, but I work at it every day to improve the lives of other people.

What is your biggest achievement to date?

Being able to prove a woman can also succeed in a male dominated industry by hard work and dedication.

What do you like most about your job?

Coaching and Guiding my teams

Who is your role model?

Former PepsiCo CEO - Indra Nooyi, a highly respected mentor for woman in business.

Did you know?

No one knows who invented the fire hydrant, because its patent was destroyed in a fire in 1836.

Bigger isn't always better

In the fire suppression industry we are always trying to plan and accommodate for uncertainties (i.e. *building owners who need to accommodate different tenants with different needs*). Which is why we always have a safety factor in place when selecting a pump for the system.

However some companies fail to realize that adding too much of a safety factor and oversizing the pump can lead to more hassles than solutions.

Pump oversizing can cause cavitation which in turn can lead to the pump performing at a reduced efficiency, components may start to fail, drastically reducing your equipment's life span. Larger pumps also cause high velocity which in turn can cause problems when trying to get the hydraulic calculations to balance.

At Amakosi Fire we have a specialized selection program which identifies the ideal pump for the duty provided.

Ensuring optimal performance and efficiency as well as saving you money.

Our innovative base designs are made so that pumps are interchangeable
